

FAQs

Q. How many treatments are required?

A. While immediate facial contouring improvement is visible in most cases even after the very first treatment, more pronounced results are apparent after 8-12 treatments. These results are achieved in short, pain-free treatment sessions that require no downtime.

Q. How long does treatment take?

A. Facial contouring treatments take around 20-30 minutes, depending on the area being treated. These treatments are non-invasive, safe and pain-free! There is no downtime associated with the treatments so you are able to immediately resume your regular activities.

Q. What does the treatment feel like?

A. Treatment with Radio frequency is very pleasant. Your skin will warm up and it feels a bit like a massage. The treatment is very gentle and there is no pain.

What our Patients are Saying:

☞ Slowly but surely I developed a double chin. Its hereditary... It was the least favorite part of my body. I had 6 SharpLight treatments and couldn't believe the results - my chin was back to its original shape and I feel absolutely wonderful ☺☺

Lory Kreuk - SharpLight Patient

☞ I always had a full round face. I decided to have the SharpLight treatment, and I feel and look 10 years younger. My jawline is more pronounced, and my face is more oval. I love the new me! ☺☺

Rubi Johnson - SharpLight Patient

Why should you choose facial contouring with SharpLight

- ▶ Visible results from the very first treatment
- ▶ Clinically proven, long lasting results
- ▶ Non-invasive, fast, pain-free treatment
- ▶ No downtime, 'lunchtime' procedure
- ▶ Safe and effective solution for all patient profiles

What our Practitioners are Saying:

Orly Zibli
Home of Cosmetics and Beauty

"I own a small aesthetic practice and most of my business comes from body shaping. I chose the Radio frequency technology since treatment with RF is pleasant and comfortable. My patients have been delighted with the results and my business growth has increased dramatically."

Facial Contouring with Radio frequency

Radio frequency (RF) technology has established itself as a gold standard in aesthetic treatments, primarily because the treatment is completely non-invasive, highly effective and painless. The technology has been clinically proven to reduce unwanted facial fat deposits and tighten the skin. In just a few treatments your face will feel slimmer, your skin will be tighter and rejuvenated.

Let the beauty of your face shine through

Some of us have a tendency to gain weight on our face. Often the fat concentrates around our jawline and neck. The deposits often make us look older than we are and reduce the beauty of our best features. For example, fat around your upper cheeks makes your eyes look smaller than they actually are.

The good news is that in just a few SharpLight treatments, you can achieve the facial contouring you desire. Your face will look thinner and contoured, and your unique features will take center stage.

How does it work?

SharpLight's facial contouring treatments use multi-polar Radio frequency technology. During the treatment, RF pulses are emitted into the treatment area. The pulses target the subcutaneous fat cells and cause them to shrink in size. Simultaneously, the heat causes the collagen fibers to contract, resulting in immediate skin tightening. By undergoing several treatments, the body produces new collagen and elastin which provide long-term skin tightening results.
